

ENGINEERED

AND BESPOKE ASSEMBLIES

Santon has a strong engineering team that is capable of developing bespoke designs for many applications. Our engineers are experts in the field of power distribution, control panels, door control panels, customer interface panels, and many more applications. Since 2015 we have the capability to offer complete driver desks, including all mechanical interfaces.

Santon focuses on lean management making our solutions very well engineered, easy to assemble, and easy to maintain. This supports the car owner to reduce its maintenance costs and down time of the asset.

Our automated test equipment supports you with unlimited data like mechanical and electrical functions, contact resistance, isolation testing, water tightness, and more tests can be added on request. All data is sent with the product, but it is also digitally available on request.

With production sites all over the world, we are able to offer you local content and support you locally!
